### Reports
- First International School on “The KTH Approach to Modelling the Geoid” ............................. 2

---

The **IAG Newsletter** is under the editorial responsibility of the **Communication and Outreach Branch (COB)** of the IAG. It is an open forum and contributors are welcome to send material (preferably in electronic form) to the IAG COB (newsletter@iag-aig.org). These contributions should complement information sent by IAG officials or by IAG symposia organizers (reports and announcements). The **IAG Newsletter** is published monthly. It is available in different formats from the IAG new internet site: [http://www.iag-aig.org](http://www.iag-aig.org)

Each **IAG Newsletter** includes several of the following topics:

I. news from the Bureau Members
II. general information
III. reports of IAG symposia
IV. reports by commissions, special commissions or study groups
V. symposia announcements
VI. book reviews
VII. fast bibliography

---

Books for review are the responsibility of:

C.C Tscherning
University of Copenhagen
Dept. of Geophysics
Copenhagen, Denmark
Fax: +45 35365357
E-mail: cct@gefy.ku.dk
General Announcements

Future of the International Comparison of Absolute Gravimeters (ICAG)

For many years, the BIPM took on the responsibility of organizing international comparisons of absolute gravimeters (ICAGs), supported by the Working Group on Gravimetry of the Consultative Committee for Mass (CCM WGG) and by the Study Group 2.1.1 on Comparison of Absolute Gravimeters (SGCAG) of Sub-Commission 2.1 of International Association of Geodesy.

The measurements for ICAG-2009 were made at the BIPM in September and October 2009, with the participation of twenty-one absolute gravimeters. For the first time ICAG-2009 constituted a metrological key comparison for those instruments from institutes participating to the Mutual Recognition Arrangement of the International Committee for Weights and Measures (CIPM MRA), and a pilot comparison for the others. The final report of the comparison is under completion.

In October 2009, the CIPM decided to discontinue the activities on gravimetry at the BIPM, and during its 2010 meeting held on 12-15 October, its members supported the idea that the next ICAG, in 2013, should be held at the Geodynamic and Seismology Laboratory (Walferdange, Luxembourg), with the Federal Office of Metrology (METAS) as the pilot laboratory.

The host for ICAGs after 2013 would be the subject of further discussion within the Consultative Committee for Mass Working Group on Gravimetry.

25 October 2010

ELISA FELICITAS ARIAS
Director of the BIPM Time, Frequency and Gravimetry Department

Vacant position at Astronomical Institute, Faculty of Science, University of Bern

Applications are invited for a full professorship in Fundamental Astronomy/Space Geodesy including the Directorate of the Astronomical Institute, opening August, 1, 2011, at the Astronomical Institute, University of Bern, Switzerland (http://www.aiub.unibe.ch). Candidates should have a strong research record in fundamental astronomy, e.g., space geodesy and astrodynamics in the broadest sense. Current research activities of the institute include space geodesy using GNSS and satellite laser ranging, gravity field determination and optical surveys for natural and artificial bodies in the solar system. Future research might be extended towards the study of the orbital and rotational motion of planets including their natural and artificial satellites, and to other planetary system bodies such as asteroids, and comets. The institute develops and operates the Zimmerwald Observatory. The successful candidate is expected to direct the institute’s research activities, to attract external funding, and to actively participate in the teaching and supervision of Bachelor and Master students, as well as Ph.D. students.

The University of Bern particularly encourages women to apply for this position.

Applications including a curriculum vitae, a publication list, copies of the five most important publications, a brief outline of past and future research, and a list of external funds raised, should be sent either as a hard copy to Prof. S. Decurtins, Dean of the Faculty of Science, University of Bern, Sidlerstrasse 5, CH-3012 Bern, Switzerland, or as a single PDF-file via e-mail to: dekan@natdek.unibe.ch, by 31 January 2011.

Meeting Announcements
2011 IAG General Assembly
at IUGG2011: “Earth on the Edge: Science for a Sustainable Planet”
Melbourne Convention and Exhibition Centre, Australia
28th June – 7th July, 2011

- Registrations opened 16th August, 2010
- Conference website now open: http://www.iugg2011.com
- Scientific program of symposia, workshops, fieldtrips, symposia convenors, plenary and keynote speakers already available on website

The next IAG General Assembly will be held as part of the major IUGG2011 international conference at the new Melbourne Convention and Exhibition Centre from 28th June to 7th July, 2011. IUGG (or the International Union for Geodesy and Geophysics) is a collaborative grouping of eight scientific learned societies or associations, as follows:

- International Association of Geodesy (IAG)
- International Association for Cryospheric Sciences (IACS)
- International Association of Geomagnetism and Aeronomy (IAGA)
- International Association of Hydrological Sciences (IAHS)
- International Association of Meteorology and Atmospheric Sciences (IAMAS)
- International Association for the Physical Sciences of the Ocean (IAPSO)
- International Association of Seismology and Physics of the Earth’s Interior (IASPEI)
- International Association for Volcanology and Chemistry of the Earth’s Interior (IAVCEI)

Each association has organised its own comprehensive program of symposia, which is already available on the conference website. In addition, there will be many symposia organised by two or more associations on topical, inter-disciplinary themes, there is a conference plenary speakers program, and most symposia will have invited keynote.

The IAG Scientific Program consists of the following program of symposia:

IAG ONLY SYMPOSIA (see website www.iugg2011.com under Scientific Program for symposia descriptions, convenors names and Keynote Speakers)

- G01 Reference Frames from Regional to Global Scales
- G02 Monitoring and Modelling of Mass Displacements by Geodetic Methods
- G03 Monitoring and Modelling Earth Rotation
- G04 Multisensor Systems for Engineering Geodesy
- G05 Geodetic Imaging Techniques
- G06 Towards a Unified World Height System
- G07 High Precision GNSS

IAG - JOINT ASSOCIATION SYMPOSIA (see website www.iugg2011.com under Scientific Program for symposia descriptions, convenors names and Keynote Speakers)

- J-G01 Space Geodesy-based Atmospheric Remote Sensing as a Synergistic Link between Geodesy and Meteorology
- J-G02 Application of Geodetic Techniques in Cryospheric Studies
- J-G03 History of Geosciences from Terrestrial to Spaceborne Observations
The theme for the IUGG2011 conference at large is “Earth on the Edge: Science for a Sustainable Planet”. IUGG2011 will be the largest multi-disciplinary geophysical meeting to be held in Australia, and in excess of 3,000 delegates are expected to attend. In addition to the IAG specific program outlined above, the scientific program will address many of the environmental, sustainability and hazard issues facing the Earth, including climate change, extreme weather events, melting glaciers and ice-caps, rising sea-levels, water in arid countries, earthquake hazards and tsunamis, and volcanic hazards, processes and natural resources. It should thus be a fantastically stimulating conference.

The conference website is now open at http://www.iugg2011.com, with information about the conference, the scientific program of symposia, workshops and fieldtrips, and listings of the symposia convenors and Keynote Speakers. On-line registration for the conference opened on the website on 16th August, as well as for fieldtrips, social touring, and accommodation.

The call for on-line abstract submission has also now opened, with the deadline for abstract submission being 17th January, 2011.

The Organising Committee of IUGG2011 looks forward to welcoming the international volcanology and geoscience community to the 2011 IAG and IUGG General Assembly in Melbourne.

Ray Cas
Chair, Joint Australia and New Zealand Organising Committee IUGG2011

Reports

First International School on “The KTH Approach to Modelling the Geoid”

The 1st International School on The KTH Approach to Modelling the Geoid was held at Yildiz Technical University, Istanbul, on 20-24 of September 2010. The school consisted of a mixture of lectures and laboratory work. There were 21 participants from 7 countries. A questionnaire answered by the participants showed that the students were generally very satisfied by the training and services provided.

Many different methods have been proposed through the years for regional geoid determination by gravimetric data, each based on its own technique and philosophy. Today, each such method combines a long-wavelength Earth Gravity Models (EGMs) with local gravity data, and they mainly differ in the way they combine these data sets. The KTH approach is unique in the sense that it uses least squares technique in the spectral domain to combine the data in an optimum way by considering the errors of the EGM, the gravity data and the truncation of Stokes’ integral to a cap around the computation point. Another feature that distinguishes the KTH method from others is the way corrections for topography, atmosphere and ellipsoidal shape of the earth are applied: in contrast to other methods, which all apply these corrections both to the gravity anomaly (direct effects) and to the preliminary computed geoid heights (indirect effects), it only corrects the preliminary geoid...
heights by so-called additive corrections. Any of the additive corrections can be added afterward at any time when better data are available for its improvement (without the need to repeat all the computations). The method, called Least Squares Modification of Stokes Formula with Additive corrections (LSMSA), is the result of 30 years of research and several M.Sc. and Ph.D. theses at KTH. The LSMSA is an accurate, simple and practical method of determining the geoid. The theoretical and practical aspects of this method have been developed since 1980 to present mainly by and under the supervision of Prof. Lars E. Sjöberg, (See numerous papers, e.g. in J. of Geodesy.) The method has been successfully applied in the determination of several high-resolution regional geoid models in different areas. Through the LSMSA approach, various data, such as an EGM, gravity anomalies and a high-resolution photogrammetric/SRTM Digital Elevation Model are combined to a gravimetric geoid model, and the method can be (and usually is) designed to match with GPS/levelling data by using the least-squares principle. This method was successfully applied in the determination of several regional geoid models: over Sweden, the Baltic countries, Greece, Iran, Sudan, Zambia, Ethiopia and Tanzania. (See the M.Sc. and Ph.D. theses at www.infra.kth.se/geo.) Notable among these studies are the applications in very rough topographic areas and in several developing countries with only limited gravity anomaly data. The results of comparisons clearly show that the LSMSA is advantageous to other methods.

The major part of the course material has been presented at KTH by Prof. Lars Sjöberg and Dr. Ramin Kiamehr as one- and two-week workshops, and this was the first time the material was delivered as an international school.

Organizers
